An Inscribed Sling Bullet from Iamnia (Yavneh)

YULIA USTINOVA¹

PABLO BETZER²

DANIEL VARGA²

ABSTRACT: A lead sling bullet, unearthed at Yavneh (ancient Iamnia) and dated to the second century BCE, bears an inscription ‘victory of Heracles and Hauronas.’ This is the first mention of the pair, known as the patrons of Iamnia, in their homeland. The unique invocation to the two gods allows for new insights into the religious background of warfare in Palaestina in the Hellenistic period.

Keywords: Iamnia, Yavneh, sling bullet, Hauron, Heracles, Melqart, Hasmoneans

THE ARCHAEOLOGICAL SETTING

The sling bullet presented in this article was discovered during excavations at the site of Yavneh-East, located at the eastern edge of the modern city of Yavneh and on the southeastern slopes of Tel Yavneh (fig. 1), identified as the location of the ancient city of Iamnia. The tell is situated near the sea road (Via Maris) in the southern coastal plain, 7.5 km east of the present-day coast of the Mediterranean Sea, at an elevation of c. 22 m above sea level.

Archaeological surveys and excavations (most of them salvage excavations) have been conducted in and around the tell since the early twentieth century, yielding finds from the Middle Bronze Age II through the Ottoman period (Fischer 2005; Fischer and Taxel 2007; Ben-Ari 2014; Yannai 2014). In wake of the construction of a new neighborhood, large-scale excavations at Yavneh-East have been carried out since 2019 on behalf of the Israel Antiquities Authority.¹ Remains of residential and industrial zones of the Byzantine and Early Islamic city of Yavneh, as well as from the Chalcolithic period, the Early Bronze, Middle Bronze, and Iron Ages, and the Persian and Hellenistic periods, are being exposed in the area around the tell in the ongoing excavations.

Find Context of the Sling Bullet

The sling bullet was unearthed in Area H (see note 1). Two phases dated to the Early Roman period were discerned, comprising two distinct occupation levels with compact earth floors (fig. 2). The earlier phase includes building

Fig. 2. The Roman building and location of the Hellenistic pit in Area H

1 The excavation (Israel Antiquities Authority License No. 8999A, map reference NIG: 176640-641700/175490-640450), conducted on behalf of the Israel Antiquities Authority and funded by the Israel Lands Authority, is directed by P. Betzer and D. Varga, with the assistance of E. Kogan-Zahavi (field director); I. Kalman (assistant field director); E. Hadad and L. Nadav-Ziv (supervisors, Areas A, B, and C); P. Betzer and D. Varga (supervisors, Areas D, H, J, K, L, and M); Z. Lotan and T. Harpak (administration); A. Peretz (field photography); E. Marco, E. Aladjem, and Y. Gomani (drawing and plans); A. Freiberg (digital documentation); L. Perry Gal (zooarchaeology); E. Katalev (malacology). Area H, the context of the sling bullet discussed in this article, has been excavated since 2021.

stones discovered in the northern part of the area. The later phase includes an extensive stone structure erected over the living surface of the first phase, putting the latter out of use. The partially exposed building features rectangular rooms with walls constructed of limestone and coarsely worked kurkar. The finds in the building include coins, glass fragments, animal bones, and pottery, especially sherds of Gaza jars that allude to the structure's industrial function. East of the Roman-period building, a built and plastered installation, likely a wine press, was exposed. In the soil layer that preceded the Roman period, an Iron Age IIC activity level was discerned.

The sling bullet was retrieved from a pit dug in the loam soil in the southeastern part of the Roman-period structure. The pit, c. 1.5 m in diameter and c. 0.70 m deep, yielded a small amount of fragmentary Hellenistic pottery, comprising

Fig. 3. The Rhodian stamped handle found in the Hellenistic pit

mainly jars (90% of the assemblage), as well as jugs and bowls, and a few animal bones and shells. Notable among the finds is a Rhodian amphora handle, stamped twice, the first time with the lower side close to the lower edge of the top of the handle (fig. 3).² The stamp contains a rosebud and a name, perhaps of a second-century BCE Rhodian fabricant, Dorion: Δω[ρίο]νος, 'of Dorion' (Börker and Burow 1998: 46, No. 442, pl. 17; Palaczyk 2016: 124, fig. 3). The source of the Hellenistic

material in the pit is still unclear since the nearest known Hellenistic site is more than a kilometer south of Yavneh-East (Fischer and Taxel 2007: 221).

THE SLING BULLET

The lead bullet (figs. 4 and 5), 4.4 cm long and 1.8 cm wide, weighing 61.79 gr, features a relief inscription. The lunate sigma, oval epsilon, broken-bar alpha, and w-shaped omega are notable. The script is clear, and the average height of the characters is 3 mm.

Ἡρακλέους

καὶ Αὐρώνα

Victory of Heracles and Hauronas

² We are grateful to Gerald Finkielsztein of the Israel Antiquities Authority who studied the handle and kindly shared his observations with us.

Fig. 4. The inscribed sling bullet, Side A (νίκη)

Fig. 5. The inscribed sling bullet, Side B (Ἡρακλέους καὶ Αὐρώνα)

The inscription refers to νίκη (victory) in the nominative case, and the names of Heracles and Hauronas are in the genitive, meaning that the bullet calls for the ‘victory of Heracles and Hauronas.’ Judging by its script, physical form, and archaeological context, the sling bullet from Iamnia can be dated to the second century BCE.

INSCRIBED SLING BULLETS AND INVOCATIONS TO GODS

Lead sling bullets, or slingshots (μολυβδίδες in Greek, *glandes* in Latin), were cast in a mould. Relief inscriptions on these projectiles first appeared in the fifth century BCE. Several hundred inscribed sling bullets have been published. They fall into five main categories: commands or acclamations, names of cities or peoples, personal names (usually of military leaders), names of gods, and various symbols.³ Inscriptions on sling bullets were part of psychological warfare intended to terrorize the adversary. They communicated a message of encouragement, intimidation, or appeal that could be addressed to the bullet itself, the enemy, or a god.

An exceptional group of sling bullets, all discovered in Sicily, is particularly significant for our purposes. Just like the sling bullet from Iamnia, they feature the word νίκη, victory, on one side, and a name of a god in the genitive case, such as Δίος, Μητέρων, Ἀρτέμιδος, Ἡρακλέος, and Ἀθήνας, on the other side. These expressions mean ‘victory of Zeus,’ or victory of the Mothers (Sicilian goddesses), Artemis, Heracles, or Athena (*IG* 14. 2407.1–7; Manganaro 1982: 241–242). These projectiles shared similar physical characteristics and were probably manufactured for the rebel slaves during the Second Servile War (104–101 BCE) since some of them bear inscriptions with the word νίκη and the name of one of the leaders of this insurrection in the genitive, for instance, νίκη Ἀθηνίωνος, ‘victory of Athenion’ (*IG* 14.2407.8 a–c; cf. *SEG* 32. 915.1;

3 For slings in ancient Greek warfare, see Pritchett 1991: 1–67. For inscribed sling bullets, see Weiss and Draskowski 2010; Ma 2010, with detailed bibliography. For a recent study of physical characteristics of sling bullets, see Schinco and Small 2020.

Manganaro 2000: 130–133). The invocations to the gods appear to reflect the rebels' belief that these deities supported them and opposed their foes (McCaul 1864: 5–6; Manganaro 2000: 133).

The rebel slaves were mostly Greek-speaking former free men from the states officially allied with Rome, enslaved for failing to pay their taxes and later freed by order of the Senate. After their manumission had been revoked, Sicilian slaves rose in revolt and were joined by many poor, free men (Diod. Sic. 36.1–11; Rubensohn 1982). The leaders of the insurrection, Salvius and Athenion, were experienced religious authorities, the former specializing in extispicy and the latter in astrology (Diod. Sic. 36.4–5), and they undoubtedly used their subtle understanding of sacred matters to unify the insurgents and raise their spirits. In particular, Salvius emphasised his commitment to the ancestral Sicilian deities when he chose to sacrifice and dedicate sumptuous gifts to the Palici, the local heroes, in gratitude for his victories (Diod. Sic. 36.7).⁴ Sensitive to the Greek identity of the rebels, when proclaimed king by them, Salvius abandoned his Latin name and adopted a Greek one, Tryphon (Diod. Sic. 36.7). The social and ethnic background of the Sicilian rebels, their devotion to local cults, and passionate belief in the ultimate justice of their cause, explain the slingers' appeals to the Greek gods, in particular local deities, who were expected to support the insurgents against the Romans.

In Palaestina, two second-century BCE sling bullets have been discovered, one in Crocodilopolis, in the vicinity of Caesarea (*CIIP* 2.2092), and one in Dor (*CIIP* 2.2137). The latter is noteworthy because the inscription on one of its sides, Τρύφωνος(ς) νίκη, 'victory of Tryphon,' is reminiscent of the Sicilian projectiles referring to the victory of the rebel military leaders (Gera 1985). Five additional Hellenistic sling bullets probably originated in Dor (*CIIP* 3.2274–2278).⁵ Decorated sling bullets, without inscriptions, were discovered in Jerusalem (Sivan and Solar 1984: 114; Yuzefovsky 2018) and Samaria (Reisner, Fisher and Lyon 1924: 1:367).

Heracles and Hauronas of Iamnia

Heracles and Hauronas appear together as 'gods who possess Iamnia' in a Hellenistic (c. 100 BCE) dedication, set in a sanctuary on Delos by three men coming from Iamnia:

4 For the Palici and the significance of their cult in Sicily, see Croon 1952; Maniscalco and McConnell 2003.

5 These bullets are presently in the collection of the Beth Miriam Museum in Kibbutz Palmakhim, in the vicinity of Yavneh, but were probably collected around Dor. One of the inscriptions, No. 2274, βα(σιλεως) Τρύφωνος, refers to 'king Tryphon,' just like *CIIP* 2. 2137.

Ἡρακλῆ καὶ Αὐρώνα, θεοῖς Ἰάμνειαν κατέχουσιν, Ζηνόδορος, Πάτρων, Διόδοτος Ἰαμνῖται, ὑπὲρ ἑαυτῶν καὶ ἀδελφῶν καὶ συγγε[v]ῶν καὶ τῶν συ[v]όντων πολι[τῶν], χαριστήριον. θύειν πάντα πλὴν αἰγείου.

To Heracles and Hauronas, the gods who possess Iamnia, Zenodorus, Patron, Diodotus, of Iamnia, on behalf of themselves, their brothers, kin, and the citizens with them, a thank-offering. Everything may be sacrificed but goat meat (*ID* 2308; *SEG* 23. 512).⁶

The same sanctuary, consecrated to the gods of Iamnia, yielded another dedication, Ἡρακλ[ῆ] καὶ τοῖς ἄνω θεοῖς, ‘to Heracles and all the gods of above’ (*ID* 2309; Bruneau 1970: 475). The scholarly consensus is that the Heracles worshipped by the natives of Iamnia on Delos was the Greek counterpart of the Phoenician Melqart, whose cult was prominent on the island (Bruneau 1970: 410).⁷

Hauron or Horon was a Canaanite god, occasionally mentioned in Egyptian, Ugaritic, and Mesopotamian sources since the nineteenth century BCE.⁸ Two Canaanite princes referred to in nineteenth-century BCE Egyptian texts bear the name of *Haurānu-‘abum*, ‘Hauron the Father’ (Albright 1941: 11; van Dijk 1989: 59). Toponyms in Palestine, such as Beth Horon and Hauran, called Auranitis, ἡ Αὐρανῖτις in Greek, are considered associated with Hauron (van Dijk 1989: 60; Rüterswörden 1999: 425). Several personal names are derived from the god’s name. For instance, a man named ‘Ebed-Horon,’ עבד חורון, owned a Hebrew seal dated to the eighth–seventh centuries BCE (Albright 1936: 6), and ΑΥΠΑΝΟΣ, probably to be read Αὐπάνοϝ, was one of the Hellenizers in Jerusalem in 160 BCE (2 Macc. 4.40; Rigsby 2008: 20).

In Egypt, Hauron’s cult is attested to by many more sources than in Canaan. He was depicted as a falcon and called upon as a protector against enemies, appearing in the latter capacity in four magical incantations in the twelfth-century BCE Great Harris Papyrus (Albright 1936: 3–4; van Dijk 1989: 62–64). Hauron had

6 The prohibition of goat sacrifices also occurs in a document retrieved from the neighbouring sanctuary of the gods of Ascalon: *ID* 2305; cf. *ID* 1720; Bruneau 1970: 474. It is noteworthy that the sacred regulations of several sanctuaries on Thasos (*IG* 12 Suppl. 414, 394, 409) forbade sacrifices of goats to Heracles (fifth century BCE), Peitho, and Hera (second century BCE). The Phoenicians were present on Thasos since the mid-seventh century BCE, and the Thasian Heracles amalgamated Greek and Phoenician characteristics (Her. 2.44; Paus. 5.25.12; van Berchem 1967: 88–109). The ban on goat sacrifices, on both Delos and Thasos, might therefore originate in Phoenician cultic traditions (van Berchem 1967: 99, cf. Lipiński 1995: 490).

7 For the cult of Melqart and his widespread identification with Heracles, see Bonnet 1988: esp. 129–131; 2015: 290–304.

8 On Hauron or Horon, see Albright 1936; 1941; Caquot 1979/80; 1982; Xella 1988: 55–58; van Dijk 1989; Lipiński 1995: 363–366; Rüterswörden 1999.

a temple in Giza, near the great sphinx, with whom he was probably associated (Gray 1949: 29).⁹ In Mesopotamia, Hauron was mentioned in a seventh-century BCE incantation from Arslan Tash (Albright 1941: 11; Gray 1949: 29; Caquot 1979/80: 174; van Dijk 1989: 60).

In Ugaritic tradition, Hauron was an ambivalent deity, invoked to both cause and prevent harm (Caquot 1979/80: 177; Rüterswörden 1999: 426; Bonnet 2015: 195–196).¹⁰ He was described as living in a hiding place or a cave, *mšd* or *hwr*. His name is probably related to the latter word, referring not only to natural caves, but also to the netherworld (Albright 1941: 10–12; Xella 1988: 55; van Dijk 1989: 62). In the *Epic of Keret*, Hauron is called upon, among other gods, to smash the heads of the king's enemies (*KTU* 1.16. 6. 54; Albright 1941: 9–11; Xella 1988: 56; van Dijk 1989: 60; Rüterswörden 1999: 425; Spronk 1999: 276).¹¹ In another text, he is attributed exceptional magical powers (*KTU* 1.169; van Dijk 1989: 60–61; Spronk 1999: 276, 278), in particular, healing.¹² Hauron is often associated with snakes, as well as protection against snake bites (*KTU* 1.100; Spronk 1999: 279–280; Dietrich and Loretz 2000: 266–402).

In the second half of the first millennium BCE, the Phoenicians spread the cult of Hauron throughout the Mediterranean (Rüterswörden 1999: 425). In some places, he was worshipped together with another god, whose various local designations reveal associations with Heracles-Melqart. In an inscription discovered in the Phoenician settlement of Antas in Sardinia, Hauron was associated with Sid, a god who is sometimes equated with Melqart-Heracles (Caquot 1979/80: 176; Xella 1988: 57; van Dijk 1989: 62).¹³ The natives of Iamnia who founded the Delian sanctuary that yielded the dedication to Heracles and Hauronas were, without a doubt, of Phoenician origin. The Phoenicians, specifically the Sidonians, constituted a considerable part of the population of Iamnia and other cities located along the coast (Isaac 1998: 13–18; Lipiński 2004: 304–335).¹⁴ Similar to Heracles worshipped together with Hauronas on Delos, Heracles was the Greek designation of Melqart in Iamnia.

9 For a discussion of the date of Hauron's appearance in Egypt, see Lilyquist 1994.

10 Cf. Xella 1988: 46 on the 'functional fluidity' of the Semitic deities.

11 Virolleaud (1936) suggested that *ybn* in this text means *Yabneh*, apparently influenced by the then-recent publication of the Delos inscription; however, the overwhelming majority of scholars accept the reading of de Vaux (1937: 372), who interpreted *ybn* as 'o my son' (Albright 1941; Gray 1949; Caquot 1979/80; Lipiński 1995: 366).

12 It has been suggested that Hauron was an earlier version of the Phoenician healing god Eshmun, identified with the Greek Asclepius (Gray 1949: 33–34), or homogenous to the apotropaic deity Shadrafa (Caquot 1979/80: 175; 1982: 243; Bonnet 2015: 193).

13 It is possible that Hauron was also mentioned in another Sardinian inscription, from Olbia (Lipiński 1995: 363–364). For the cult of Sid and his sanctuary in Antas, see Lipiński 1995: 332–350; for Sid and Melqart, see Lipiński 1995: 341.

14 The Sidonians of Iamnia on the Sea even corresponded with Antiochus V as a separate group (*CIIP* 3. 2267).

In the Phoenician homeland, each city had its pantheon, usually headed by a divine couple (Sader 2019: 185),¹⁵ but Melqart, originally the lord of Tyre, was prominent in the entire Phoenician-Punic world. The perception of Melqart as the Tyrian Heracles is attested to long before Alexander's conquest of the Levant (van Berchem 1967; Lipiński 1995: 226–243; Stafford 2012: 191–193) and was common in the Hellenistic period. The cult of Heracles-Melqart served as a 'middle ground' for the Greek and Phoenician population of mixed cities around the Mediterranean, allowing for cooperation and shared hopes in times of danger (Bonnet 2014: 296–298; 2015: 97).¹⁶

In the Hellenistic world, the Greek Heracles, the irresistible hero and avenger of evil, was often endowed with epithets like *Kallinikos* and *Aniketos*, Victorious and Invincible (Weinstock 1957: 212–214; van Berchem 1967: 103–104). Alexander strove to outdo this hero-god, and many Hellenistic kings, particularly the Seleucids, imitated their great predecessor and adopted titles of *Nikator* or *Kallinikos*, Conqueror or Victorious (O'Sullivan 2015). The link between victory and Heracles in the inscription on the sling bullet from Iamnia is related to the inherent association of Heracles with triumph. Hauronas, in his turn, could protect by means of his witchcraft, and smash one's enemy. As a pair, Heracles and Hauronas formed a perfect team to be implored as grantors of victory. Therefore the functional harmony between the gods named on the sling bullet was significant, alongside their role as the city's patrons in times of peace.

The fame of the idols of Iamnia, even among the Judaeans, was emphasized in 2 Macc. 12.40:

εὑρον δὲ ἐκάστου τῶν τεθνηκότων ὑπὸ τοὺς χιτῶνας ἱερώματα τῶν ἀπὸ Ἰαμνείας εἰδώλων ἅφ' ὧν ὁ νόμος ἀπείργει τοὺς Ἰουδαίους.

Then under the tunic of every one of the dead they found sacred tokens of the idols of Iamnia, which the law forbids the Jews to wear.¹⁷

Pendants in the form of miniature copies of monumental cult statues were very popular in the Hellenistic and Roman world (Faraone 2019). They were worn on the body, and many people had such personal amulets on their person, especially when they went into battle. Magical objects depicting the gods of Iamnia were probably considered particularly potent.

Before the discovery of the sling bullet with the names of Heracles and Hauronas, the gods of Iamnia remained anonymous. The inscriptions from Delos offered a clue, but it is the invocation to Heracles and Hauronas on the sling bullet

15 For the shared beliefs and cults of the Phoenician cities, and the 'ratio of continuity and innovation' between Ugaritic and Phoenician culture, see Sader 2019: 181–182.

16 For Heracles, Melqart, and the 'middle ground', see Malkin 2011: 119–141.

17 Translation of all quotes from 1 and 2 Macc.: *Revised Standard Version* of the bible.

found at Yavneh, manufactured for the defenders of the city, that establishes beyond doubt their role as the divine protectors of Hellenistic Iamnia.

THE HISTORICAL CONTEXT

During the second century BCE, pagan Iamnia, allied with the Seleucids, was attacked by the Hasmonean armies more than once.¹⁸ The victory of Judas Maccabaeus at Emmaus in 165 BCE was followed by the mass slaughter of his pagan opponents throughout Idumaea and in Iamnia as well (1 Macc. 4.15; Schürer, Millar and Vermes 1973: vol. 1: 165; Bar-Kochva 1989: 270–271). In 163 BCE, pagan Iamnia was again attacked by Judas (2 Macc. 12.9). In 147 BCE, the surrounding area was a scene of conflict between Apollonius, the former governor of Coele Syria, and Jonathan the Hasmonean (1 Macc. 10.69). Between 139 and 137 BCE, Cendebaeus, appointed by Antiochus VII Sidetes, fought there against Simon the Hasmonean (1 Macc. 15.40; Schürer, Millar and Vermes 1973, vol. 1: 198).

The Hasmoneans presented their wars as a struggle for the true faith. The professed aim of these wars was to obliterate the beliefs of other peoples and to create a country that was religiously homogenous and ritually pure (Grabbe 2010: 67; Trampedach 2012).¹⁹ In contrast to the norms of Hellenistic warfare, the Hasmoneans deliberately destroyed pagan sanctuaries, purged the conquered cities of traces of idolatry, and forced circumcision on their enemies (Trampedach 2012: 75). The Hasmonean army adopted biblical models and symbolically stressed its anti-pagan zeal (Trampedach 2012: 65–66). In 163 BCE, the signal (σύνθημα) for the beginning of the Jewish attack on the Seleucid army was Θεοῦ νίκη, ‘God’s victory,’ expressing the faith of the Jewish soldiers in heavenly assistance (2 Macc. 13.15; Gera 1985: 155; Bar-Kochva 1989: 220). It was only natural that the pagans of Iamnia responded, in their turn, by invoking their patron gods in a motto that mirrored the slogan of the Hasmoneans.

The formula consisting of the word ‘victory’ in conjunction with a god’s name appears on sling bullets in two regions, Palaestina and Sicily (Manganaro 2000: 131–133). It is not attested elsewhere, although sling bullets were used in warfare throughout the Mediterranean. Putting these slogans on projectiles carried a message that was quite different from the traditional ways of summoning divine help before or during a military campaign, such as sacrifices, prayers, processions, and other rites directed to the gods (Jacquemin 2000; Ulanowski 2016; Dillon, Matthew and Schmitz 2020). Inscribed sling bullets were intended to intimidate

18 For an overview of the literary sources on Iamnia, see Schürer, Millar and Vermes 1973: vol. 2, 109–110.

19 For the connections between ethnic, political, and religious aspects of the Hasmonean wars, see, e.g., Horsley 2009.

the enemy, and the proclamation of an ancestral god's victory was not a prayer addressed to a deity but a threat, addressed to the adversaries.

The occurrence of inscriptions predicting the victory of the gods supporting the slingers' side in the conflict in both Sicily and Palaestina is not accidental. Second century BCE Palaestina was an arena of enormous inter-community hostility, resembling Sicily during the Second Servile War in this respect. In both regions, the confrontation assumed religious connotations, although in Palaestina, it was much more consistent and prominent. It is noteworthy that the rebels' sling bullets in Sicily bore names of different gods, not necessarily associated with warfare. Hauronas and Heracles were described in the inscription from Delos as 'the gods who possess Iamnia.' The emphasis probably was on the role of these gods as the divine protectors of the community. In Sicily and Palaestina, the tiny bullets proclaiming the forthcoming victory of the supporting ancestral deities attest to religious tension that was rare in Hellenistic warfare.

CONCLUSIONS

The inscription on the sling bullet from Iamnia expresses hope for the victory of Heracles and Hauronas. The name Heracles probably denotes the Hellenised version of Melqart, and Hauronas was a Canaanite god known in the ancient Near East as Hauron or Horon. Heracles and Hauronas were regarded as divine patrons of Hellenistic Iamnia, but until now, the pair was known only from an inscription discovered on Delos. The inscription on the sling bullet is the first occurrence of the names of the two gods in a document unearthed in Iamnia.

Several episodes of warfare in and around Iamnia during the second century BCE involved fighting between the local pagans and the Jews. The announcement of the imminent victory of the city's patron gods on sling bullets may have occurred during such inter-religious conflict.
